MIDTERM EXAMINATION
1st Semester, AY 2026 – 2027

Course Title:	IT314AB - Application Development and Emerging Technologies
Instructor's Name:	Chiara Marie C. Canque
Allotted Time:	2.5 hours
Highest Possible Score:	100
Score per Test Part:	I - 100

Name:
Date:

Instructions:

This is an **open-notes examination**. Examinees may use their existing notes and CTF 1–7 materials. **The use of AI tools and Wi-Fi/internet access is strictly prohibited during the examination.**

Continue your previous **Valorant Inbox** in Flutter, ensuring proper use of widgets, variable-based data, appropriate data types, image assets, and fallback values for missing data. Your application must also demonstrate the use of `ListView.builder`, interactive actions, conditional widgets, and navigation to a separate chatroom screen.

Application Requirements

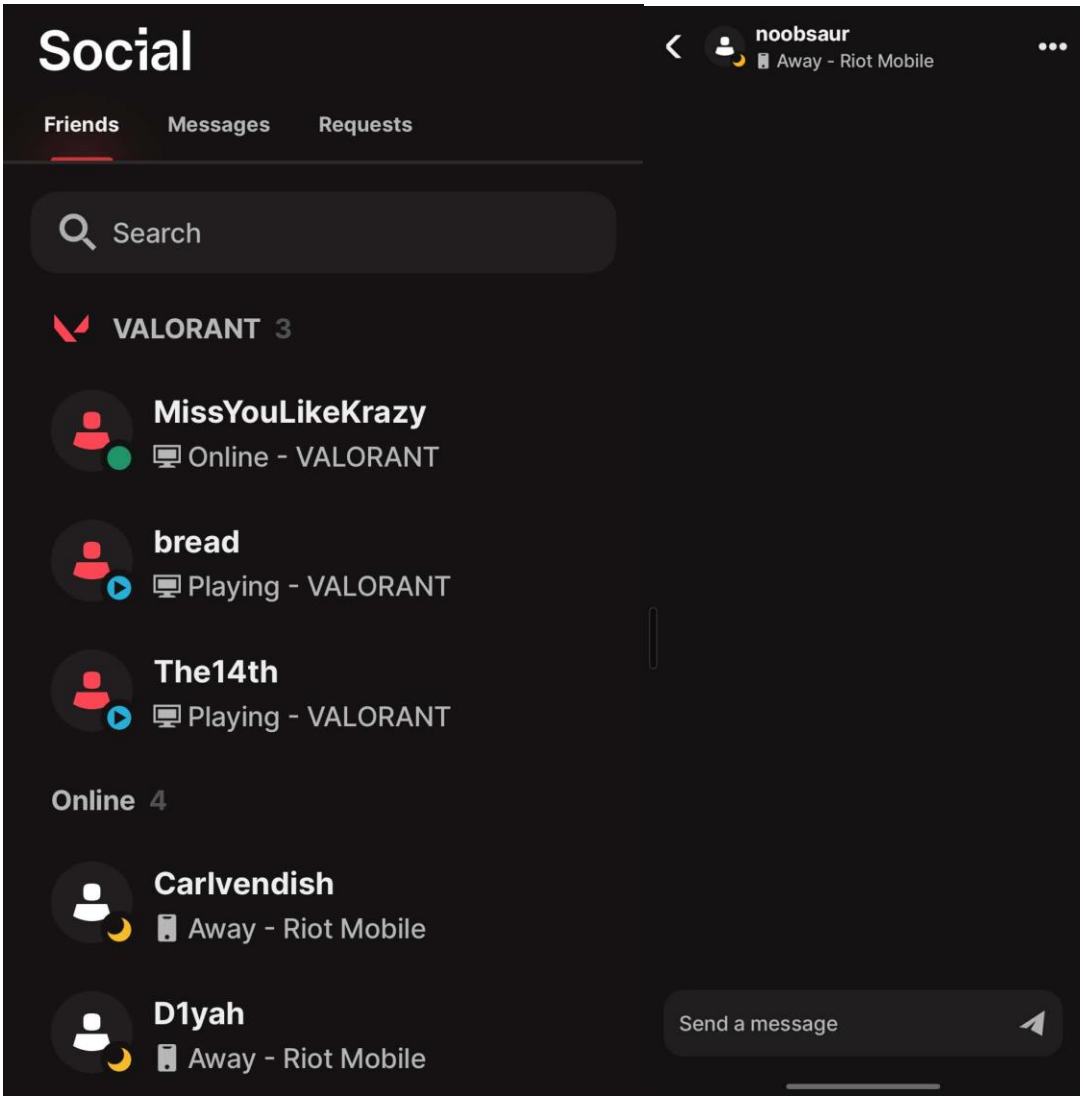

Your application must include the following:

1. **Inbox Listing**
   - Replicate the provided inbox UI in Flutter.
   - Display multiple conversations using `ListView.builder` and a Dart list.
2. **Interactive Features**
   - Implement at least one meaningful interaction using `onTap` or `onPressed`.
   - Examples: mark as read or delete.
3. **Conditional UI**
   - Use boolean variables and conditional widgets to reflect message states.
   - Examples: unread indicators or online/offline status.
4. **Chatroom Navigation**
   - Use `Navigator` to open a separate chatroom screen when a conversation is selected.
   - Pass the selected conversation's data where appropriate.
   - You must be able to input a message. (No send logic yet)
5. **Data & Fallbacks**
   - Store displayed information in variables with appropriate data types.

- Provide fallback values for missing data, such as `"Unknown User"`, placeholder images, or `"No message available."`

6. **Styling & Assets**
   - Use appropriate widgets, assets, colors, typography, spacing, and icons to match the reference UI.

[Inbox Screenshot]

[Chatroom Screenshot]

Criteria	Description	Points	Score
UI Replication Accuracy	Accurately reproduces the provided inbox UI, including overall structure, positioning, proportions, and major elements.	**5**	
Widget & Layout Structure	Correctly uses appropriate Flutter widgets and layout structures to construct the interface.	**15**	

ListView.builder	Uses `ListView.builder` to dynamically generate inbox items from a list of data.	**15**	
Interactive Features	Implements functional interactions using `onPressed`, `onTap`, or equivalent event handlers.	**15**	
Conditional Widgets	Displays appropriate UI changes based on message states, such as read/unread, online/offline, or empty states.	**15**	
Navigator	Selecting an inbox item navigates to a separate chatroom screen.	**15**	
Data Variables & Fallbacks	Uses variables with appropriate data types for displayed data and provides fallback values or visuals for missing data.	**15**	
Assets & Styling	Correctly uses required assets and applies appropriate colors, typography, spacing, borders, and other visual details.	**5**	
Total		**100**
